Presenting:

A journey from an unstructured
maintenance department to
relying on digital twins

What is a Digital Twin?

Identical

Digital representation of something real in constant interaction.

Reality	Digital Twin
Self-Monitoring	 <p>Task automation</p> <p>Search</p> <p>Real time status</p> <p>Real time availability</p>
Warnings	
Simulation	
	

Why to create one?

In a world competing for limited resources:

 <p>INCREASING SPEED</p>	Wins Customers
	Retains Customers
	Drives Efficiencies
	Reduces Errors
	Saves Money

2. Digital Twin Concepts

Dusobox Corp. Case study

2. Dusobox Corp.

Identical Digital Twin of an Asset

Asset identification.
Asset location
Asset functional map

- Fast asset/location/system identification
- Fast job reporting
- Fast asset information retrieval
- Real-time Asset Tracking

2. Asset Digital Twin

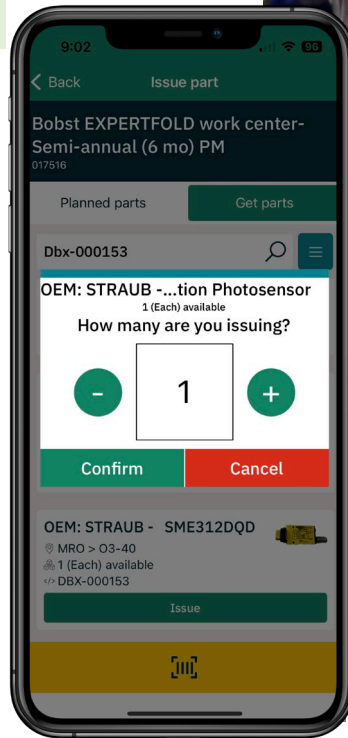

Storeroom Digital Twin

Identical Digital Twin of the Storeroom

Spare parts ids.
Visual aids.
Store locations.
Vendor's parts

- 
- Locating pieces
 - Inventory availability
 - Semi-automatic ordering
 - Image recognition

3. Storeroom Digital Twin

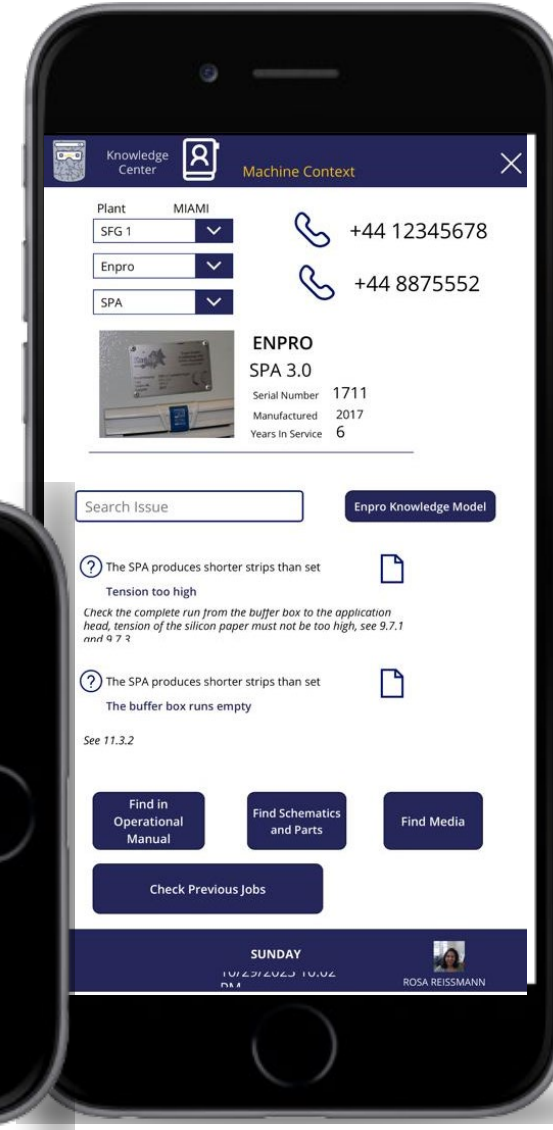

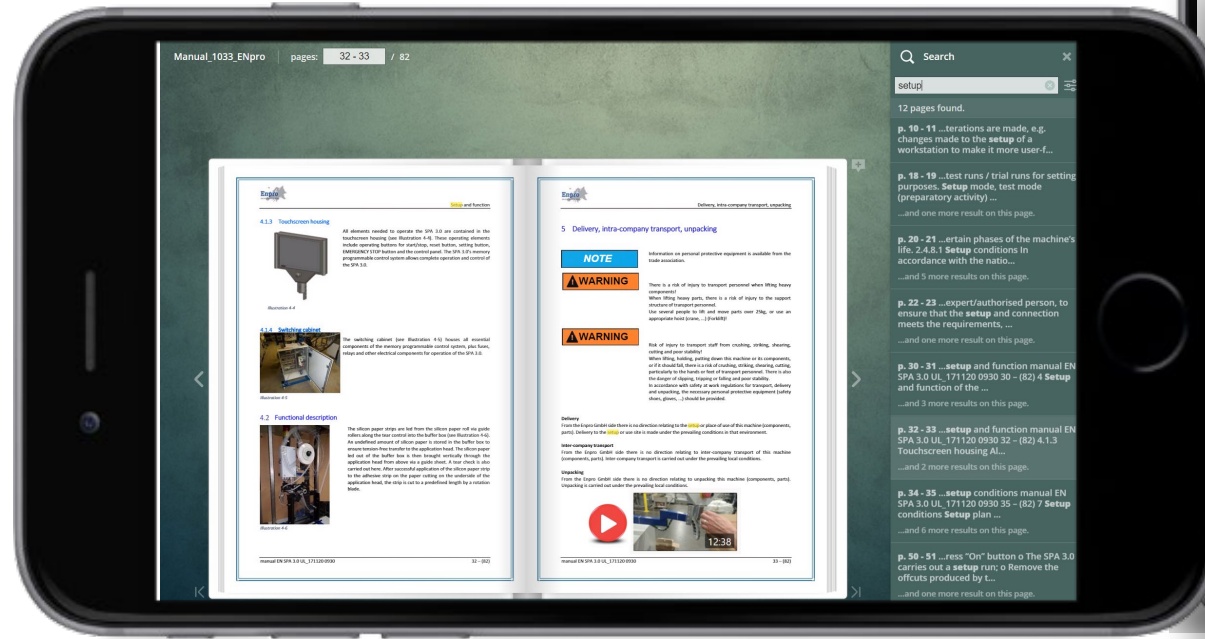

Technical knowledge Digital Twin

Identical Digital Twin of Technical Knowledge

Digital Documentation
Videos.
Plant conceptual mapping.

- Fast retrieval of part numbers
- Functional understanding
- Faster troubleshooting
- Bot answers

4. Technical Knowledge Digital Twin

Implementation Strategy Vision

Higher speed

Dashboard (set of variables)
Automation (cruise control)
Autonomy (collision control)

VS.

Lower speed

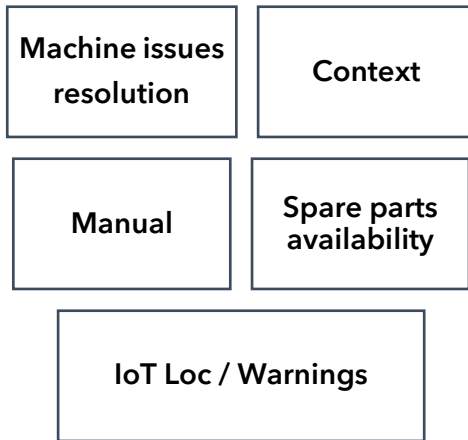

- **A Parallel** model is faster than a linear model
- Parallel is not multi-tasking, it is to provide humans with more real-time **context**

5. Implementation Strategy - Vision

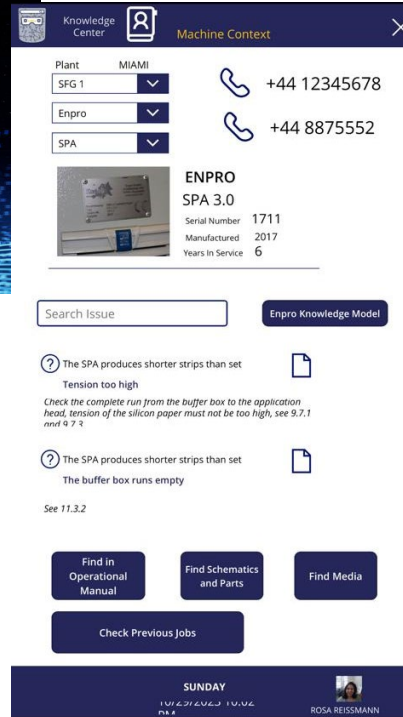

Implementation Strategy Vision

Parallel Model

- Faster
- Less task with more context

Linear Model

- Slower
- Many more tasks performed by humans

5. Implementation Strategy - Vision

Implementation Strategy Project Management

DIGITAL TRANSFORMATION	BUSINESS ENTERPRISE SOLUTIONS
Initiative	Project
Product leader	Project manager
Proof-of-concept	Business requirements
Start small, grow big	Start big
Closer to real time	Period analysis
Narrow impact	Wider impact
Personal focus	Corporate focus
Competency	Competitiveness
Short time to results	Long time to implement
Small team	Multi-role team
Transformation architect	Solution architect
\$	\$\$\$

6. Implementation Strategy - Project Management

Technology Strategy Stack of Tech

DIGITAL TRANSFORMATION TECHNOLOGY	FUNCTIONALITY	BUSINESS APPLICATIONS TECHNOLOGY
Cognitive Services (OCR, speech recognition, visual recognition, text analytics, etc.)	Quick human interaction	
CMMS (Mobile version)	Field Job	
CMS	Documentation Experience Videos	
Bar coding / RFID	Quick Identification	
Generative AI	Virtual Agents (Bots)	
Machine Learning	Machine Monitoring	
IoT	Sensors / signal analysis	
Process Automation	Approvals/Request	

Enterprise finances and Operations	ERP
Customer Relationship Management	CRM
Maintenance Management	CMMS

7. Technology Strategy - Stack of Technology

Success by Design - Adoption

Success is achieved by using an **Identical Digital Twin**.

Adoption
Personal Team Work

Speed up

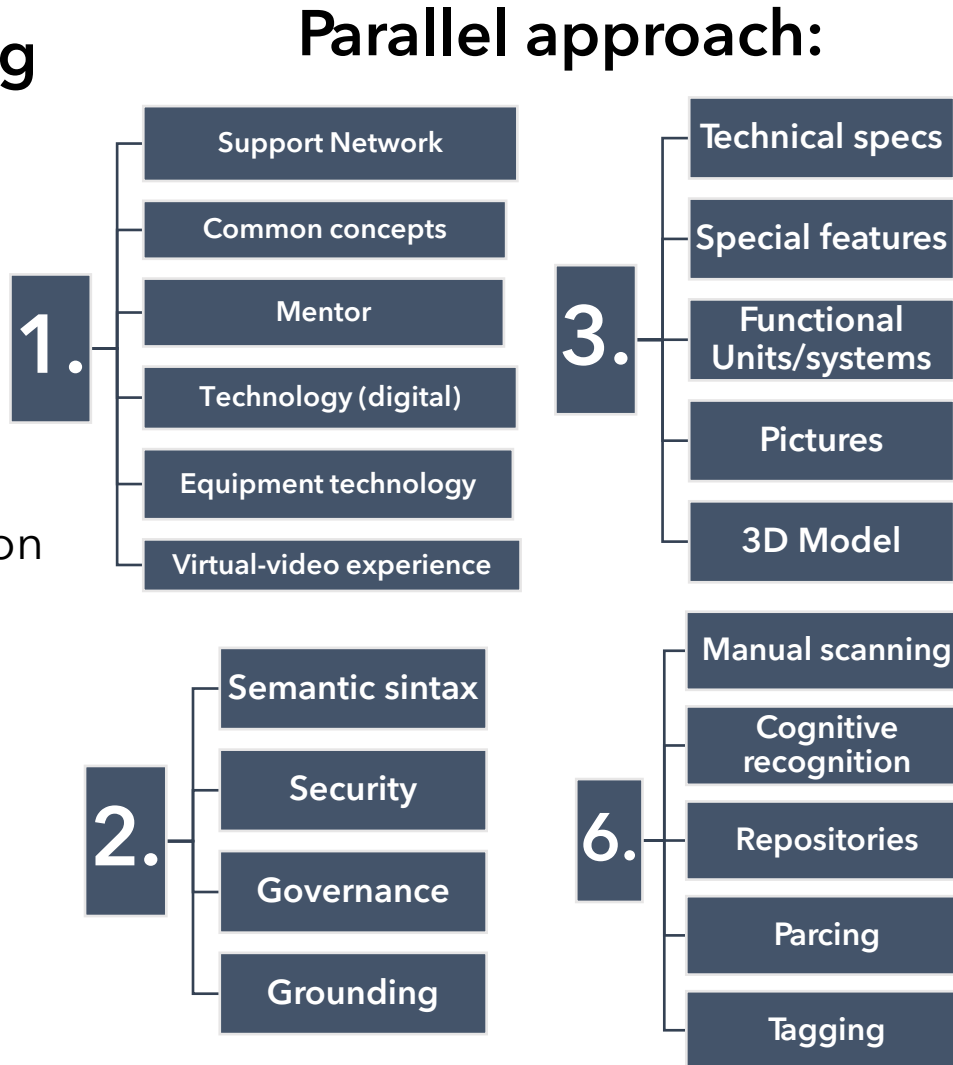

Implementation Strategy Success Factors

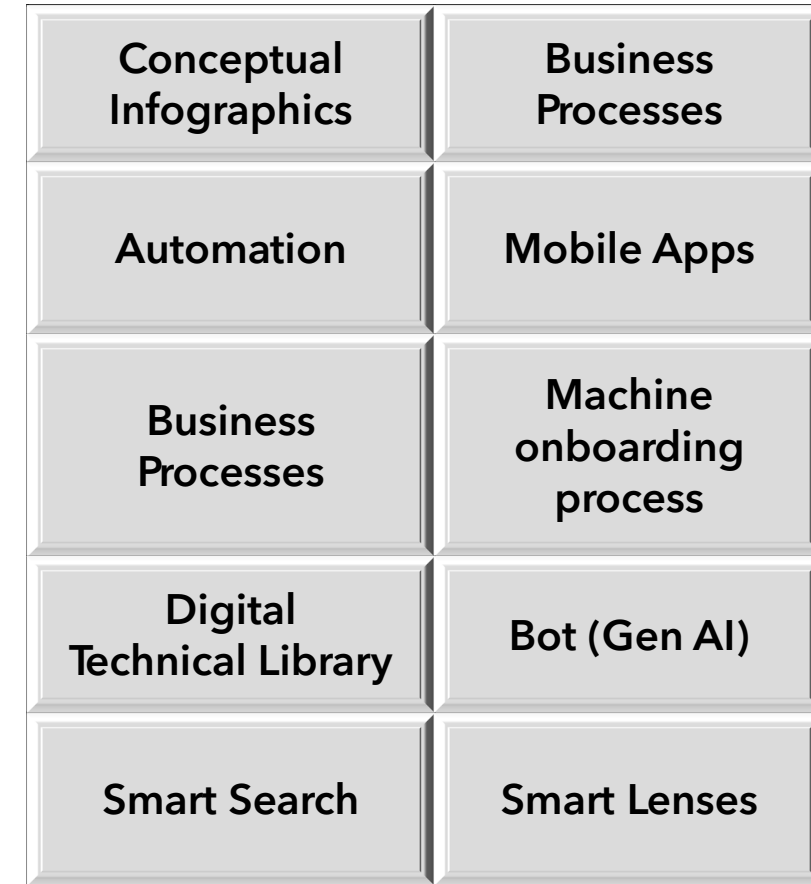

Onboarding speeds adoption

Onboarding needs:

1. Person
2. Bot
3. Asset
4. Parts
5. Vendor
6. Documentation

Artifacts:

10. Implementation Strategy - Onboarding

Benefits

- Time savings/speed to market
- Knowledge retention
- Elimination of mistakes
- Process automation, i.e. onboarding, approval, identification, knowledge sharing
- AI accuracy
- Leadership development

11. Benefits

Thanks for your attention...
